

Script: Email 2.0

File size: 229 KB

From: Annice.se

Created: 2019

GENERAL INFORMATION:

The script "Email 2.0" is created in Sublime by Annice Strömberg, 2019. It is built in HTML5, CSS3, and PHP. Additions for this upgraded version are support for responsive layout, as well as client side validation for generally enhanced performance.

CONTACT DETAILS:

info@annice.se.

LICENSE:

The script is of license type GPL (General Public License), which means that it is free of charge and can be modified to suit your needs. However, in the event of redistribution the script must be made available under the same license terms.

SUPPORTED FUNCTIONS:

- Client and server side validation.
- Responsive design.
- Enclose sender's IP address.

REQUIREMENTS:

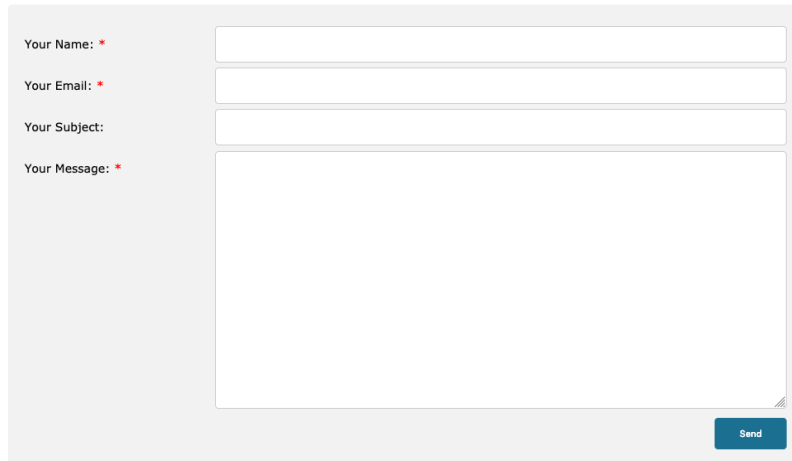

The script can be run on a server that supports PHP.

INSTALLATION GUIDE:

1. Open the file "contact.php" and change to your email address and time zone at the top of the file.
2. Upload the folder "Email2.0" to your PHP supported server and navigate to "contact.php" to start sending emails.

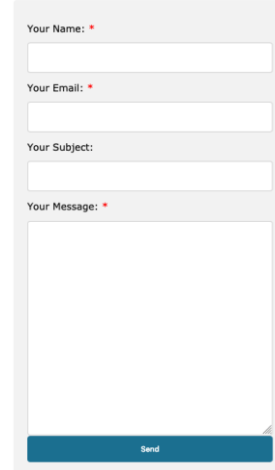

DEMO SCREENSHOTS:

Email Form

This screenshot shows the desktop view of the email form. It features a light gray background with four input fields stacked vertically on the left side, each with a red asterisk indicating a required field. The fields are labeled 'Your Name:', 'Your Email:', 'Your Subject:', and 'Your Message:'. The 'Your Message:' field is a large text area. A blue 'Send' button is located at the bottom right of the form.

Email Form

This screenshot shows the mobile device view of the email form. The form is vertically oriented and uses a light gray background. The input fields are stacked vertically, with the 'Your Message:' field being a large text area. A blue 'Send' button is positioned at the bottom of the form.
